x) The sum calculation is done without taking into account single values below limit of detection or limit of quantification.

Explanation: The symbol "<" or n.d. in the result column means, the substance concerned is not quantifiable at the limit of quantification shown opposite.

The sign "<...."(LOD)" or n.d. in column result means, the substance concerned cannot be detected within the limit of detection.

The sign "<....(+)" in column result means, the substance concerned has been qualitatively detected between limit of detection and limit of determination.

Parameter-specific analytical measurement uncertainties and information regarding the method of calculation will be provided upon request if the reported results are above the parameter-specific limit of quantification.

Explanation: OM = on original matter; DM = on dry matter base

Remark to amount of sample received: Total amount including packaging

Remark to hydrolysis-relevant substances without carrying out the hydrolysis module: The validated limit of quantification is 0.01 mg/kg.

All data below this determination limit are to be interpreted as non-quantifiable traces. The actual content including the bound residues can only be determined via an additional hydrolysis step.

The activities reported in this document are accredited according to DIN EN ISO/IEC 17025:2018. Only not accredited activities are identified by the symbol "x)".
